Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

Claims 15-18 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claims add not further action steps to the base method.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 6, 7, 8, 10, 12, 13 and 19-28 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,090,107 to Borgmeier et al. Borgmeier et al. teach an electrosurgical instrument which includes a reusable electrode shaft, a disposable tip and a novel, insulated coupling for removably connecting the disposable tip to the electrode shaft (abstract). A body portion (Fig. 4, # 70) with a detent that acts as a stop (Fig. 4, # 72) receives an electrode assembly inserted into the body. A distal portion of the electrode assembly (Fig. 4, # 50) engages the stop in the body and is shaped to inhibit rotation. The body portion is disclosed as made of plastic (dielectric). The tip and body are coupled to an elongated probe

Art Unit: 3739

(Fig. 1). The attachment of the tip to the probe is broadly interpreted as adapted to be inserted into a probe.

Regarding claims 4, 10, 19 and 22, welding yields a product by process claim and is given limited weight for patentability. Further, once the tip is welded, the stop limitation of the base is structurally irrelevant.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent Application Publication US 2005/0090816 to McClurken et al teaches an electrode insertable into a body with slots to prevent rotation and that may be welded

U.S. Patent 5,662,647 to Crow et al. and U.S. Patent 6,299,584 to Iseberg both disclose electrode tips with intermediate bodies with stopping means that attach to a probe.
